

under pressure at 0.1-0.4 N/mm². Pref., the surface of (A) facing (B) has an embossed structure.

Pref., (A) consists of 90-60 pts. wt. isotactic PP or EP copolymer contg. up to 25 wt.% ethylene, 10-20 pts. wt. rubbery copolymer compatible with PP (e.g. EPDM, SBS copolymer) and 20-40 pts. wt. reinforcing fillers (talcum, chalk, glass fibre, etc.); (B) is obtd. e.g. by foaming a mixt. of PP with blowing agent (e.g. fluorocarbon) and normal additives, etc.

USE/ADVANTAGE - The invention provides solid plastic/foam laminated composite for use in the prodn. of insulating, shock-absorbing prods., e.g. bumpers, head-rests, dashboard panels, door linings, arm rests etc. for motor vehicles. A strong, durable bond is obtd. by welding the 2 components together, and the prods., being made of only one type of plastic, are easily recycled. (3pp Dwg.No.0/0)

Abstract (Equivalent): EP 528879 B

A process for the production of a composite comprising at least one solid base layer, produced by injection moulding, of a propylene polymer by bonding the two layers, where exclusively the surface of the base layer facing the foam layer and provided with relief structures is softened by warming to a melt layer depth of from 2 to 3 mm, and the base layer and foam layer are then joined under a pressure of from 0.1 to 0.4 N/mm².

Dwg.0/0

Abstract (Equivalent): US 5300361 A

Prodn. of a polypropylene composite of a base layer, foam layer and top layer comprises injection moulding a base layer of polypropylene with an upper surface relief structure; heating and softening the upper surface of the base layer, melting to a depth 2-3 mm, and application of a polypropylene foam layer; and similarly bonding to an upper polypropylene layer.

USE/ADVANTAGE - The prods. are sound and heat insulating, shock absorbing materials for vehicle components, e.g., dashboards, arm and head rests, door panels, bumpers, etc.. Allows recycling of polypropylene waste.

Abstract (Basic): DE 20102194 U1

NOVELTY - The lining of an automobile roof comprises two layers (1, 2) and (1', 2') which are welded to one another only at certain places (3) so that air cushions covered by dome-like regions of the upper layer (1, 2) are formed.

USE - For lining of automobile roofs.

ADVANTAGE - The lining offers protection to automobile occupants as a result of its cushioning properties. It also functions as a sound absorber.

DESCRIPTION OF DRAWING(S) - The drawing shows a cross section through the proposed roof lining.

Outer fiber reinforced thermoplastic material (1, 1')

Inner closed-cell foam material (2, 2')

Welds (3)

Air cushions (4)

pp; 10 DwgNo 1/3

Technology Focus:

TECHNOLOGY FOCUS - POLYMERS - Each of the two layers forming the inner lining of the automobile roof consists a fiber reinforced thermoplastic outer layer and a closed-cell foam inner layer of polyolefine.
